KICK-OFF SESSION

Hi there, I'm Channuka Jayatilaka.

Associate - Branding & Marketing
@ Rootcode

**Building intelligence the world
can trust**

*Combining three pillars of tech
into a **single** competition.*

Theme of the
Tech-Triathlon 2026

The Intelligent Enterprise

TEAMS

170+

PARTICIPANTS

1100+

Unfolding the Triathlon

The Phases

Timeline

Competition Rules

1. One business challenge runs across all three phases. The challenge brief and all datasets will be released together on the first day.
2. Every submission must be original work that has not been published or exhibited before.
3. Each deadline is final. If your team misses a phase, you may continue in the competition, but you will receive zero points for that phase.
4. The Designathon, Hackathon, and Datathon **contribute equally** to your final score.
5. You may use the programming languages, frameworks, IDEs, and AI tools of your choice, but they **must be disclosed**.
6. All dates and times follow Sri Lanka Standard Time, **UTC+05:30**.

DESIGNATHON KICK-OFF SESSION

Hi there, I'm Dhanushka Liyanage.

Associate Lead UX Designer
@ Rootcode

WHAT WE'RE ASKING

One Operation. One system.

Design the solution to the problem in Part One. This phase is as much about product thinking as it is about screens.

The strongest submissions will show the team understood the operation, decided what matters most, and had the discipline to leave things out.

CORE MANDATE

You are not designing four separate apps. You are designing one solution with 'x' faces.

aut
o_
aw
eso
me

What the solution does, and which screens exist, is your decision. We've given you the operation, the constraints, and the people — the product is yours.

SCOPE GUIDANCE

Restraint is a judged criterion

01 You do not need to design every conceivable screen.

JUDGED, NOT JUST CHECKED

02 Design the screens that let each user do their job — including at least one for a day that goes wrong.

03 A tightly scoped solution with clear rationale will outscore a sprawling one.

DEGRADATION SCREENS

Design for the day it breaks

01

Design a Degradation Screen

Systems like this are tested when something goes wrong. Design at least one moment where the normal flow fails, designed in full detail.

02

Name & Justify the Scenario

Which failure you design for is your decision. Justify it in a short paragraph: why this failure, and why it matters for Waypoint's operations.

aut

JUDGING FOCUS

Depth is what earns the marks, not count.

More than one scenario is welcome. Focus on operational relevance, detail, and thoroughness in your error recovery flows.

Deliverables

01

User personas

One per user role, grounded in Part One's conditions and pain points.

02

User screen flows

The screens for each user, with a one-paragraph rationale per screen.

03

Degradation screen(s)

At least one, each with its scenario named and justified.

04

Demo video

A walk-through demo video exploring your design in detail.

05

High-fidelity prototype

Built in a design tool of your choice, covering the flows designed.

06

Core trade off explanation · optional

One page or a single diagram explaining the central tradeoff.

07

Style guide · optional

Typography, color tokens, and design system specifications.

08

AI tool disclosure

What was AI-assisted, what was not, and how AI was used.

SUBMISSION FORMAT

What to submit, and by when

Design file

Personas, flows, rationale and degradation screens — one file, distinct pages.

TeamName_Designathon.zip

Prototype link

A shareable link to your high-fidelity prototype.

Figma / Framer / Web

Explainer video

A short walkthrough of your design and the thinking behind it.

Duration: 3–5 minutes

DEADLINE

**Day 5 •
Tue 8 Sep**

11:59 PM IST

Strict Cutoff

Submission form: [link to be shared] | Upload file, prototype link and video together | Judged as submitted on Day 5.

JUDGING CRITERIA

How this phase is scored

Criterion	Weight
Problem framing	25%
User-context fidelity	20%
Visual and interaction design (incl. cross-user coherence)	15%
Restraint and prioritisation	15%
Degradation screen quality	15%
Domain accuracy	10%

RULES & RESTRICTIONS

Play it straight

- 01** Your design is judged exactly as submitted on Day 5.
- 02** You may keep developing the solution in the Hackathon — but document any significant departures in your README.
- 03** AI tools are allowed — say so. Your disclosure should state plainly what was AI-assisted, what was not, and how AI was used.

HACKATHON KICK- OFF SESSION

Hi there, I'm Krishan Samarawickrama.

Senior Technical Lead
@ Rootcode

From design to implementation

Making it functional

Build the solution you designed in the Designathon, as a working, deployable, responsive web application.

Ground rules

01

Build your design

Your Day-5 design is the specification. Build the flows, screens and capabilities you defined; fidelity to it is scored.

02

Operable end to end

A judge must be able to run one complete cycle through your system, touching every user role you designed for.

03

Responsive web app

The web version is mandatory and is assessed on a phone-sized screen for mobile users. Native apps are an optional extra only.

Plans must be runnable. Respect every operating constraint in the booklet. Departed from your design? Document it in the README.

DELIVERABLES

01 Deployed working system

A public URL, plus credentials for seeded accounts, one per user role.

03 Docker Compose at the repo root

docker compose up runs the complete stack, including the database with seed data, plus .env.example.

05 Demo video

5 – 8 min unlisted YouTube video: every user role completing your walkthrough, plus a brief code and architecture walkthrough.

02 Source repository

GitHub monorepo TeamName_SolutionName. README: setup, configuration, seeded accounts, walkthrough, design departures.

04 Architecture diagram & data model

How the system fits together and how the data is structured.

06 AI tool disclosure

What was AI-assisted, what was not, and how AI was used.

DAY 10

Submission

DEADLINE

Sunday 4 October
11:59 PM IST

Through the submission form

- ✓ Repository link
- ✓ Deployed URL
- ✓ Seeded credentials
- ✓ Demo video link

No late code

Code pushed after the deadline will not be considered.

Stay live

Keep your deployment running through the review period, and through the semi-final and Grand Finale if you advance.

AI tools

Use them freely, but you must understand, explain and own every line you submit.

DATATHON KICK- OFF SESSION

Hi there, I'm Gajithira Puvanendran

Senior Data Scientist
@ Rootcode

From Data to Insight

Guiding the Experience

Turning Data into Actionable Insights

WHAT WE EXPECT

A Data Scientist's or Machine Learning Engineer's role extends beyond model creation.

01

**Data
Expertise**

02

Pipeline Dev

03

**Architectural
Design**

04

**End-to-End
Solutions**

05

**Strategic
Thinking**

CHALLENGE GOAL

In this challenge, competitors are expected to showcase not just model creation, but their overall capabilities in these critical areas.

DELIVERABLES

01

Architecture Diagrams

Present sketches of model, preprocessing, and deployment architectures

02

Data Pre-Processing Document

Document your data analysis approach, preprocessing methods, and rationale

03

Model

Submit the final trained model in .h5 or .pkl format

04

Notebooks

Provide all notebooks used for experimentation and preprocessing, with the best model marked as TeamName_FinalNotebook.ipynb

05

Demo Video

3-5 minute YouTube video (unlisted) showcasing the model architecture, preprocessing steps, and challenges faced.

06

AI Tool Disclosure

Tools used, What was AI-assisted, what was not, and how

DAY 15

Submission

DEADLINE

Friday 9 October

11:59 PM IST

How to submit

Add all deliverables into one folder, compress it a zip file named **TeamName_Datathon.zip**, and upload it to the submission form

Rules & Regulations

01

Deadline

The submission form will close after the deadline.

02

Model Restrictions

You are restricted from using any pre-trained models, except for any data generation or pre-processing.

03

API Usage

Proprietary API-based services for data preprocessing are prohibited and will affect scoring.

04

No-Code & AI Tools

Usage of Low-code/No-code AI tools or fully automated end-to-end modelling tools are restricted.

Judging Criteria

01

Data Wrangling

02

**Model & Architecture
Implementation**

03

Performance Score

04

Out of the Box Thinking

05

Demo Video

Good Luck!
